1. Remove the license plate. Unplug all wiring harnesses leading to the bumper. Release the wiring harness from the clips attached to the back of the bumper and move harness away from bumper as necessary.
2. Place blocks or jack stands under the bumper to support it during mounting bolt removal.

NOTE: Bumper may be attached to top of factory tow hitch. Remove these (2) hex bolts first if equipped. Release the plastic clips attaching the plastic cover to the steel bumper, **(Figure 1)**. Remove cover and hardware attaching the bumper to the bumper brackets, **(Figure 2)**. With assistance, remove the outer steel bumper, then remove the hex bolts attaching the brackets to the frame and slide the brackets out of the ends of the frame, **(Figures 3 & 5)**.

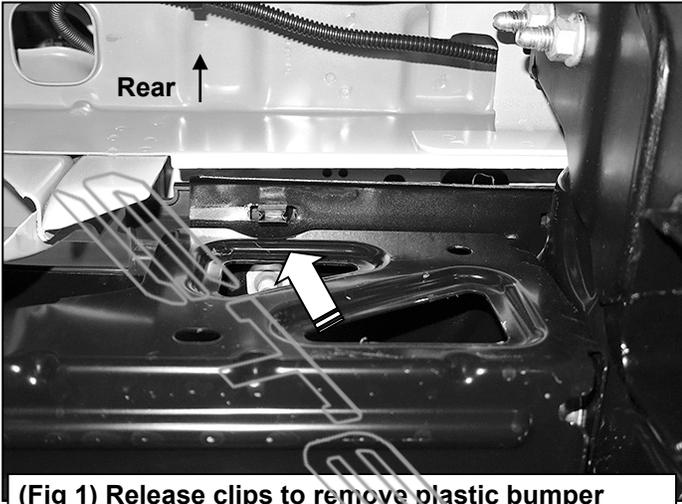

OPTION: To avoid disassembling the bumper and to remove the bumper with brackets as an assembly, the end of the bed must be raised slightly to clear the inner tab on the brackets. Insert socket with long extension up and through the access hole in the bottom of the frame to remove the rear hex bolts, **(Figure 4)**. Once the bolts have been removed, raise the bed. Slowly open tailgate and check for clearance. Level and adjust the bumper and fully tighten all 14mm hardware to 65-70ft-lbs, 12mm hardware to 45-55ft-lbs, and 10mm hardware to 30-40ft-lbs.
